

Draft specification

**Lifting unit DIAGO 504 - 115.0x72.0x11.0 cm**

- For cabinet width 120 - 180 cm

Manufacturer: Granberg

Article Info

DIAGO 504 is an electrical height-adjustable lifting system used for the mounting of new or existing wall cabinets. The lift is a diagonal lift that lowers the cabinet in a curved motion downwards and forwards to the front of the work surface. The movement can be stopped at any height. The lift is available in two widths that fit cabinets from 60.0 cm to 180 cm. The upper cabinet beam is adjustable to fit cabinet heights 70-110 cm. The cabinets can be fine-tuned in all planes (X, Y, Z) to fit the surrounding cabinets exactly. The lift protrudes 11 cm from the wall which must be taken into account when mounting the surrounding cabinets.

The lift is equipped with a reliable safety system that guarantees safe operation without any risk of pinching. Lighting and a light ramp can be mounted on the safety plates.

The lift can be integrated with kitchens from any kitchen manufacturer.
